14 Aug

Arrived island 2000.

Bandied 1250 5th ad. Rope streaming behind me, also helper for half of the time. Many of the solters are just laying fresh eggs, many nearly hatched 1-2 days old thick, and a great abundance of large nearly full-grown chicks. Adult are Spotty, and banding is relatively poor. Despite full dark of the moon, no fowls brood, were not nearly as sporting.
